What did this TA do well, and what could they work on?

Comments
I thought that this TA did a good job going over practice problems and making us aware of what types of problems we had to be able to do well in order to do well on the quizzes.
Examples were helpful. I got what I needed from the discussions.
This TA was very good at explaining course concepts and doing an abundance of example problems and suggested problems from the textbook. Perhaps the TA could work on moving a bit more slowly. At the beginning of the semester, it was a good pace but when concepts began to grow more complex, the discussion mostly felt like we only had enough time to copy down the solutions but not enough time to digest what and why something was being done. Overall, this TA was great though.
The TA did well with understanding topics and explained it well but something that can be improved is trying to stay organize when working out the problems. Sometimes it can be difficult to understand what is happening.
This teacher answered questions really well and knew what she was talking about. Going through the problems each class helped to set the class up for success, especially for the weekly quizzes. Sometimes her notes would have mistakes, so she would have to spend some in-class time trying to figure out what went wrong, but nothing major.
Very good at explaining the difficult theorems learned throughout the semester.
